

LNER Azuma train comes home to Durham

[Background image of the Hitachi LNER Azuma train site at Newton Aycliffe]

[Spokesperson for Hitachi, Newton Aycliffe LNER Azuma train manufacturing site, speaking]

[Background video images showing staff working in and around the site]

So, Hitachi choose to come here to Newton Aycliffe because of County Durham's heritage and rail. It was a place where the world's first passenger trainline was, very close to this facility and it's been a massive success and we are now world class train manufacturing facility, delivering trains for Scotland, for London, for the South West and here for the North East and County Durham at which we both use for moving our people around the country.

And, also here we are building trains in the North East, for the North East, for LNER.

[Images of work taking place on the trains onsite and engineers completing their work]

We've been here in Newton Aycliffe is similar to some of the others places in the North East of England, a lot of really good, young engineering talent and they've shown brilliant attitudes to developing new skills and working really hard and are also good fun to work with.

[Spokesperson speaking to the camera in the centre of the factory site]
